

OrboNation Newsletter: Healthcare Payments Edition October 2021

How to Achieve Interoperability in Healthcare After the Pandemic

Daily Host News takes a look at a topic we consider integral to the future of the healthcare industry, and that is Interoperability. As important as it was previous to the COVID emergency, interoperability is now absolutely crucial in a pandemic environment.

They separate interoperability into four classifications: Foundational Interoperability, Structural Interoperability, Semantic Interoperability, and Organizational Interoperability...

KLAS Research: Cerner, Epic Among Leaders in Adoption of Healthcare Data Analytics

We have addressed the topic of healthcare interoperability in several previous posts, highlighting how important interoperability is to growth in healthcare, how to achieve it, and how it enables healthcare personalization. With all this established, it is important to take a look at how healthcare is able to leverage the data from interoperability. An article from *Health IT Analytics* takes...

More Time and More Automation Needed for No Surprises Act Compliance

As noted here previously, the No Surprises Act -- which is part of the Consolidated Appropriations Act introduced earlier this year -- presents some formidable challenges to the healthcare industry. The No Surprises Act is so named because it is designed to eliminate some of the "surprises" that group health plan participants encounter from unexpected charges, which most people will agree is certainly a needed solution...
